

CHAPTER 3 REVIEW

1. If $k(x) = -\frac{2}{3}x - 5$, then find $k(7)$.

\uparrow
x-value

$$k(7) = -\frac{2}{3}(7) - 5$$

$$k(7) = -\frac{14}{3} - 5$$

$$k(7) = -\frac{14}{3} - \frac{15}{3}$$

$$k(7) = -\frac{29}{3}$$

2. If $m(x) = 8x - 15$, then find $m(-3)$.

\uparrow
x-value

$$m(-3) = 8(-3) - 15$$

$$m(-3) = -24 - 15$$

$$m(-3) = -39$$

3. If $g(x) = \frac{3}{2}x - 9$, find x when $g(x) = 15$. y-value
↓

$$\begin{array}{r}
 15 = \frac{3}{2}x - 9 \\
 +9 \qquad \qquad +9 \\
 \hline
 \frac{2}{3} \cdot 24 = \frac{3}{2}x \cdot \frac{2}{3} \\
 16 = x
 \end{array}$$

4. A small town in SC had a population of 6328 in 2000. By 2008, the population had increased to 9256.

a) If $p(x) = 366x + 6328$ can be used to find the number of people living in this town and x represents the number of years since 2000, find $p(22)$ and explain what this means.

x-value ← # of years since 2000

$$p(22) = 366(22) + 6328$$

$$p(22) = 8052 + 6328$$

$$p(22) = 14,380$$

In 2022, the population of this town was 14,380.

b) If $p(x) = 12,550$, find x and explain what this means. ^ y-value

$$\begin{array}{r}
 12,550 = 366x + 6328 \\
 -6328 \qquad \qquad -6328 \\
 \hline
 6,222 = 366x \\
 \frac{6,222}{366} = \frac{366x}{366} \\
 17 = x
 \end{array}$$

$$p(17) = 12,550$$

In 2017, the population was 12,550.

5. Find the *x-intercept* and *y-intercept* of each equation below. **SHOW ALL WORK.**

a) $5x + 10y = -30$

x -intercept = -6

y -intercept = -3

x-int

$$5x + 10(\cancel{0}) = -30$$

$$\frac{5x}{5} = \frac{-30}{5}$$

$$x = -6$$

y-int

$$5(\cancel{0}) + 10y = -30$$

$$\frac{10y}{10} = \frac{-30}{10}$$

$$y = -3$$

b) $4x - 9y = 18$

x -intercept = $\frac{9}{2}$ or 4.5

y -intercept = -2

x-int

$$4x - 9(\cancel{0}) = 18$$

$$\frac{4x}{4} = \frac{18}{4}$$

$$x = \frac{9}{2} \text{ or } 4.5$$

y-int

$$4(\cancel{0}) - 9y = 18$$

$$\frac{-9y}{-9} = \frac{18}{-9}$$

$$y = -2$$

6. Graph the equation below by finding the x-intercept and y-intercept. **Show your work below the graph.**

$$-8x + 12y = -48$$

$$x\text{-int} = 6$$

$$y\text{-int} = -4$$

$$y = mx + b$$

7. a) Rewrite the equation $4x - 3y = 12$ in slope-intercept form.

Solve for y

$$\begin{array}{r} 4x - 3y = 12 \\ \underline{-4x} \qquad \underline{-4x} \\ -3y = -4x + 12 \\ \underline{-3} \qquad \underline{-3} \qquad \underline{-3} \\ y = \frac{4}{3}x - 4 \end{array}$$

- b) What is the slope? $\frac{4}{3}$

- c) What is the y-intercept? -4

$$y = mx + b$$

8. Graph the equation below from slope-intercept form.

$$y = \frac{5}{4}x - 2$$

$m = \frac{5 \text{ up}}{4 \text{ right}}$ $y\text{-int} = -2$
 starting point

9. Graph the equation below by converting to slope-intercept form. Show your work below the graph.

$$\begin{array}{r|l} -10x - 2y = -6 & \\ \hline +10x & +10x \\ \hline -2y = 10x - 6 & \\ -2 & -2 \quad -2 \end{array}$$

$$y = -5x + 3$$

$$m = \frac{-5}{1}$$

$$y\text{-int} = 3$$

$$y = mx + b$$

10. Write an equation in slope-intercept form of the line graphed below.

Answer: _____

$$y = \frac{1}{4}x + 3$$

$$y = mx + b$$

11. Write an equation in slope-intercept form of the line graphed below.

Answer: _____

$$y = -2x - 3$$

12. Graph the equation. $x = -6$ vertical line
 $x = \#$

13. Graph the equation. $y = 3$ horizontal line
 $y = \#$
