

### 3.7 Part 2 Graphing a Rational Function

- Find the asymptotes (vertical, horizontal, or slant).  
Graph with dashed lines.
- Find the x- and y-intercepts, if any.  
Plot the points.
- Use an x-y table to find additional points (3) on each side of the vertical asymptote(s). Plot the points.
- Sketch the curves through the points.

Example:  $y = \frac{x^2 - 4x + 2}{x - 1}$
